Please find below and/or attached an Office communication concerning this application or proceeding.

DETAILED ACTION

Priority

An application in which the benefits of an earlier application are desired must contain a specific reference to the prior application(s) in the first sentence of the specification of in an application data sheet (37 CFR 1.78(a)(2) and (a)(5)). The specific reference to any prior nonprovisional application **must include the relationship** (i.e., continuation, divisional, or continuation-in-part) between the applications except when the reference is to a prior application of a CPA assigned the same application number.

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 7-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Application/Control Number: 10/663,492

Art Unit: 3738

Claim 7 recites the limitation "the inwardly facing surface" in lines 1 and 2 of the claim. There is insufficient antecedent basis for this limitation in the claim.

Claims 8-11 are indefinite for depending from claim 7.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,2,12,13,16,17 are rejected under 35 U.S.C. 102(b) as being anticipated by Marnay (5314477). Fig. 1 shows an intervertebral spacer device with first and second baseplates (110,120) that are articulatable relative to one another via surfaces 21 and 22. It can also be seen the baseplates include two pairs of engagement holes (115,116,125,126) that are engageable with posts (812,813,822,823) on the distal end of the manipulation tool 80 shown in Figs. 10, 11. Please note the intended use, as set forth in the claims, carries no weight in the absence of any distinguishing structure. Thus the spinal device is fully capable of having at least one engagement hole centered at the desired surgical approach aspects.

Application/Control Number: 10/663,492

Art Unit: 3738

Claims 1-20 rejected under 35 U.S.C. 102(e) as being anticipated by Wagner et al. (6641614). Fig. 40 shows an intervertebral spacer device with first and second baseplates 602,604 with three engagement holes 632 on one baseplate being separated from each other by a length. Additionally on the opposing side of the baseplate is a second set of engagement holes, which increases the number of engagement holes to more than four holes with each hole being spaced from one another. It can be seen that all the holes are on an inward facing surface. It can also be seen there are tools in the form of cams with a pair of posts 640,650,660 extending distally from each one. It can be seen that the second baseplate also has three pairs of holes 634 on opposing sides of the inward surface to form six total engagement holes. Each of the posts are positionable in the engagement holes. Please note the intended use, as set forth in the claims, carries no weight in the absence of any distinguishing structure. Thus the spinal device is fully capable of having at least one engagement hole centered at the desired surgical approach aspects.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian E. Pellegrino whose telephone number is 571-272-4756. The examiner can normally be reached on Monday-Thursday from 7:30am to 5pm. The examiner can also be reached on alternate Fridays.

Application/Control Number: 10/663,492

Art Unit: 3738
